NoLimit

Limitless variety

NoLimit offers an endless combination of options for architecture. As a line, cove or polygonal shape, the profile system playfully fits into any spatial geometry. Flush-mounted, suspended or as a ceiling/wall installation, NoLimit ensures a balanced general lighting and creates accents using light. This functions in offices as well as hotels, foyers and even large malls.

NoLimit **Inspire.** Create. Perform.

NoLimit is an innovative linear LED system, which allows architects, planners and building owners to take control of implementing their own lighting designs.

NoLimit offers a vast array of options to spark ideas and captivate your imagination. Anything can inspire you.

NoLimit Inspire. **Create.** Perform.

NoLimit has everything you need to realise ambitious lighting solutions. The basic modules of the kit offer almost limitless combination options.

With NoLimit, the planner is free to implement his ideas, bringing individual works to life – inspiration thus becomes creation.

Light planner:
Oliver Christen Lichtplanung

With NoLimit, the planner can decide on the ceiling structure and lighting effect in the room. The subtle design language of these slender profiles fits comfortably into the architecture. The housing which comes in black and white, accompanied by a shadow gap of 2 mm can take a prominent role or simply visually blend in with the immediate surroundings.

With NoLimit, the planner is personally able to build on a reliable framework to achieve an impressive result – a perfect performance.

see p. 16

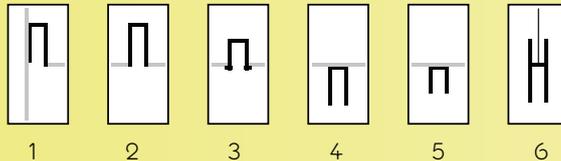

The modular principle

Simple & modular

The profiles

NoLimit consists of six profiles in which you can realise all kinds of lighting tasks. Large profiles offer three locking positions, small profiles two. The entire line system has a uniform appearance and anyone planning with NoLimit can achieve a consistent design within the structure.

> Profiles, see p. 14

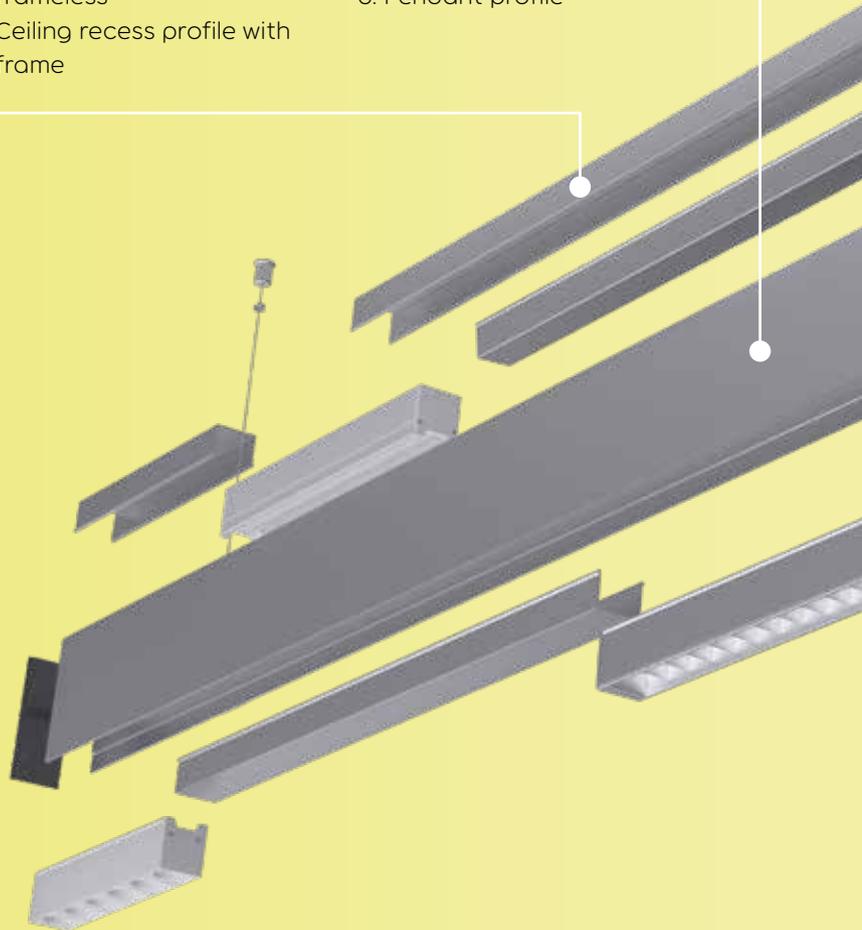

1. Light cove around a corner
2. Ceiling recess profile, frameless
3. Ceiling recess profile with frame
4. Surface mount profile, large
5. Surface mount profile, small
6. Pendant profile

The operating unit

Due to NoLimit's vast portfolio, the suitable electrical power supply has to be chosen: Voltage-controlled for applications in the low power range and current-controlled for mid and high power.

The operating devices can be installed within the profiles or mounted externally.

> Operating devices, see p. 24

The basis of NoLimit is a modular kit, which is made up of clearly defined components: profiles, light inserts and operating devices. All parts are designed to work together and are conceived for simple configuration. NoLimit is an open system which grows and which continually adapts to new requirements.

The Individuality

Optional accessories, such as decorative clasps for pendant suspensions, make each NoLimit installation one of a kind.

The accessories

The accessories complement NoLimit's lighting performance. The range includes all profile covers, as well as all the necessary contact elements for Low Power (3-pole), Mid Power Linear (4-pole) and High Power (4-pole). It also includes simple plug-in extension cables of various lengths as well as a short-circuit connector for the current-controlled Mid Power Linear and High Power modules.

> **Accessories, see p. 24**

The light inserts

Four different light inserts offer the planner the greatest possible flexibility: High Power Optics, High Power Accent, High Power Reflector, Mid or Low Power as a linear module. This range guarantees individual solutions for accentuation and general lighting. NoLimit supports dynamic colour chases with RGBW and control via Tunable White.

> **Light inserts, see p. 16**

The profiles

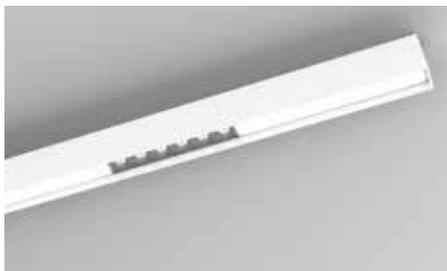

Precise & compact

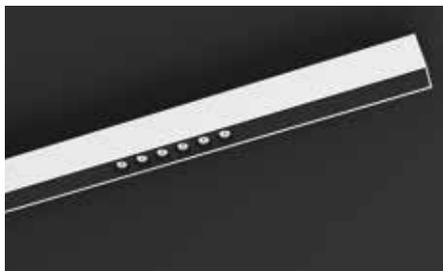

The profiles are available in two powder coatings as standard: black (RAL 9011 silk matt) and white (RAL 9016 silk matt). Six different profile geometries are available for installation, surface mounting or hanging, offering you maximum flexibility. In addition to the standard length of 2.30 m, NoLimit can be made to measure for a seamless finish. Light inserts and operating units are integrated into the profiles without need of tools using a standardised fastening system. This "snap-in" method ensures flexibility including the opportunity for subsequent modifications later on should they be needed.

Slender aesthetics & varied combination options

Create an interaction between housings and surfaces which you can either use to contrast or complement your surroundings. The consistent black and white line routing offers you huge potential possibilities in which to transform your space. The modular kit system means that all elements can be combined, whether recessed or raised. Here you can see how different lighting inserts can be simply brought together to create your perfect lighting.

Profile in RAL 9016 combination with the High Power Optics and High Power Linear light inserts

Profile in RAL 9016 in combination with the High Power Optics light insert and a profile cover in RAL 9011

Profile in RAL 9011 in combination with the High Power Linear and High Power Optics light inserts in RAL 9011

Excellent High Power Reflector light insert in combination with High Power Linear light insert

Recessed High Power Reflector light insert in frameless ceiling installation profile

High Power Reflector light insert as pendant luminaire in combination with High Power Linear light inserts for indirect ceiling lighting

Slender & efficient

With a width of only about 4 cm and a standard length of 2.30 m, these profiles set completely new standards in dimensioning lightline systems. They allow for a precise and seamless feed along walls and ceilings.

Gap-free line routing

Variable lighting effects

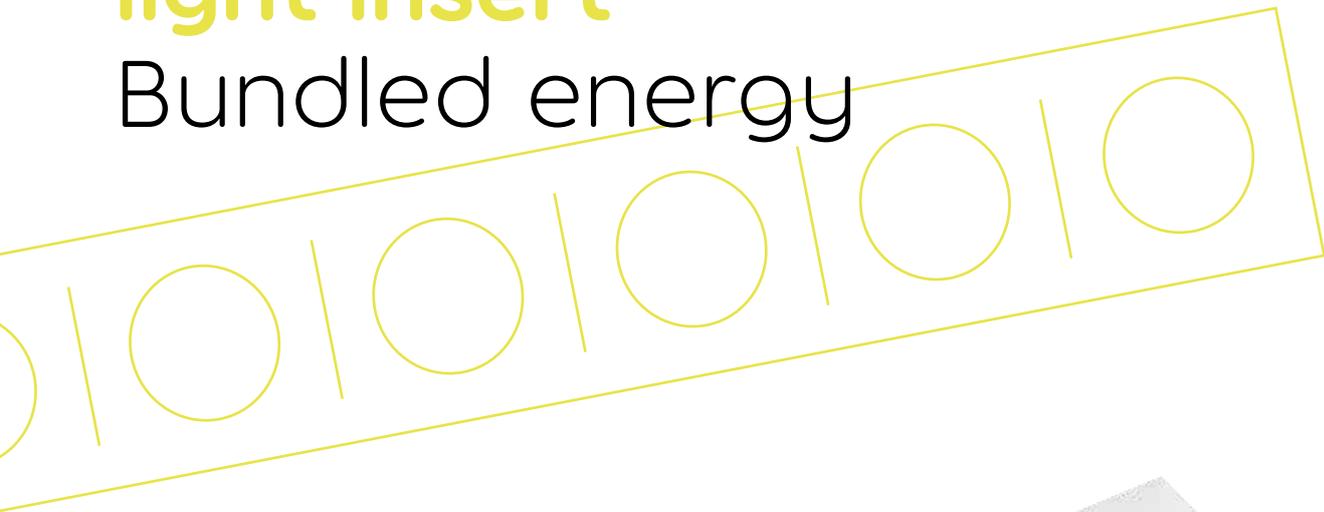

Adjustable lighting levels within the profiles adds another feature to the design. The light inserts are fitted within the profiles, and can there be locked into either a flush-mounted, recessed or protruded position.

Light inserts in three locking positions: protruding, ceiling-flush, recessed

High Power Optics light insert

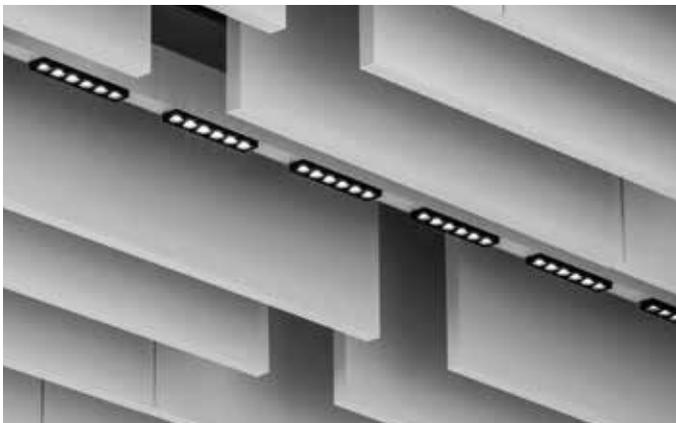

Bundled energy

High Power modules are ideally suited to complex applications within the field of general and accent lighting. The optics applied modulate the light and provide for an exact light focus and homogeneous illumination. The High Power Optics light insert works with four different radiation angles: narrow spot, medium, flood and wide oval.

Colour temperature

Our single-colour light inserts supply high-quality white light in the colour temperatures 2700, 3000 or 4000 K. Luminous flux achieves highest values of up to 1900 lm with high colour rendering, too.

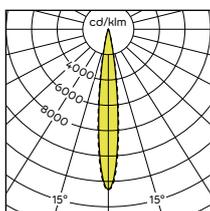

Tunable White

In the Tunable White variant, the light inserts offer ideal options for Human Centric Lighting. The infinitely-adjustable colour temperature controller allows a dynamic change of the light colour in the range of 2700 to 5000 K. In so doing, the light leaves the optics cleanly mixed and free of artefacts.

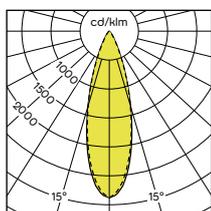

Radiation angle

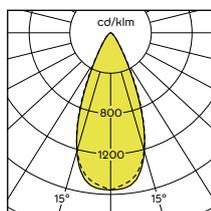

The High Power Optic light insert offers a range of different radiation angles: spot point, medium, flood and broad oval. This means that it is equally suitable for targeted illumination and for lighting different kinds of spaces.

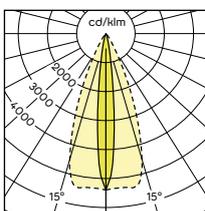

Radiation angle
14°

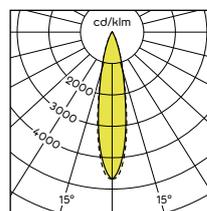

Radiation angle
30°

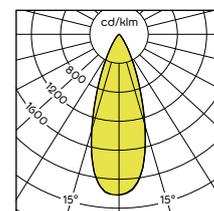

Radiation angle
45°

Radiation angle
12° x 43°

Radiation angle
20° TW

Radiation angle
35° TW

High Power Accent light insert

Precisely focussed light

The High Power Accent modules are perfectly suited for highlights and accents. The light unit can be rotated variably to all sides and is easy to align exactly.

Flexibility and modularity

With High Power Accent, the exact volume of light can be controlled by adjusting the number of modules employed. Each module is also adjustable, so that any alignment can also be precisely made.

The Accent light insert can be placed anywhere within the NoLimit system and can be adjusted at any time should you decide to change lighting concept. In addition, this compact light insert can be easily retrofitted in existing NoLimit installations.

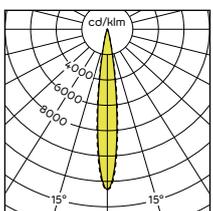

View – swivelling spotlight

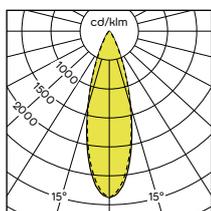

Need more light? In addition to the High Power Accent light insert, a swivelling spotlight is in the pipeline. It features up to six light outlets to allow high luminance in accent lighting.

Radiation angle for High Power Accent

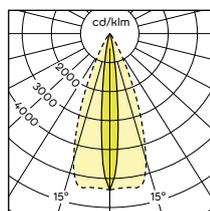

There are plenty of design possibilities to play with when you have three different optics – spot, medium and wide oval – in three light colours plus a Tunable White version.

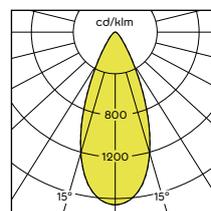

Radiation angle
14°

Radiation angle
30°

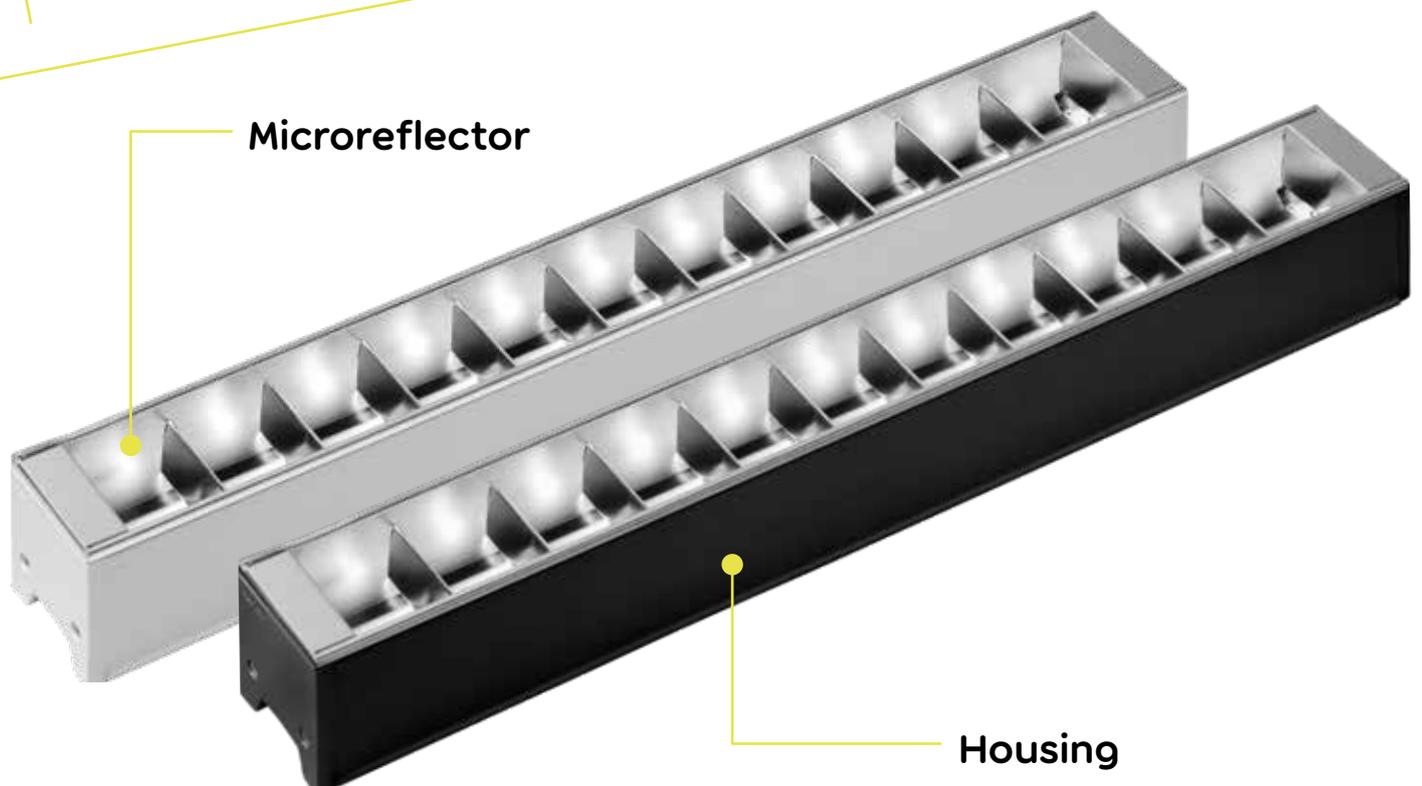

Radiation angle
12° x 43°

Radiation angle
43° TW

High Power Reflector light insert

Brilliant reflection

This High Power reflector is predestined for efficient, standardised and balanced general lighting of large areas.

The High Power high-performance Tunable White LEDs allows for adjustable colour temperatures from 2700 to 5000 K at a luminous flux of around 1600 lm. This means that this hi-tech light solution differs considerably from standard grid luminaires with a static light colour.

Even light distribution

Through targeted steering and internal reflection, the luminaire appears as an even light strip, without any detectable light escape.

Microreflector for optimal glare suppression

Coherent look with a light strip

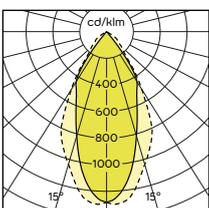

Tunable White

With control via Tunable White, the colour temperature is between 2700 and 5000 K. This allows you to adapt the white light to the individual requirements of your project. Irrespective of the setting, the luminous flux leaves the optics cleanly mixed and free of artefacts.

Radiation angle

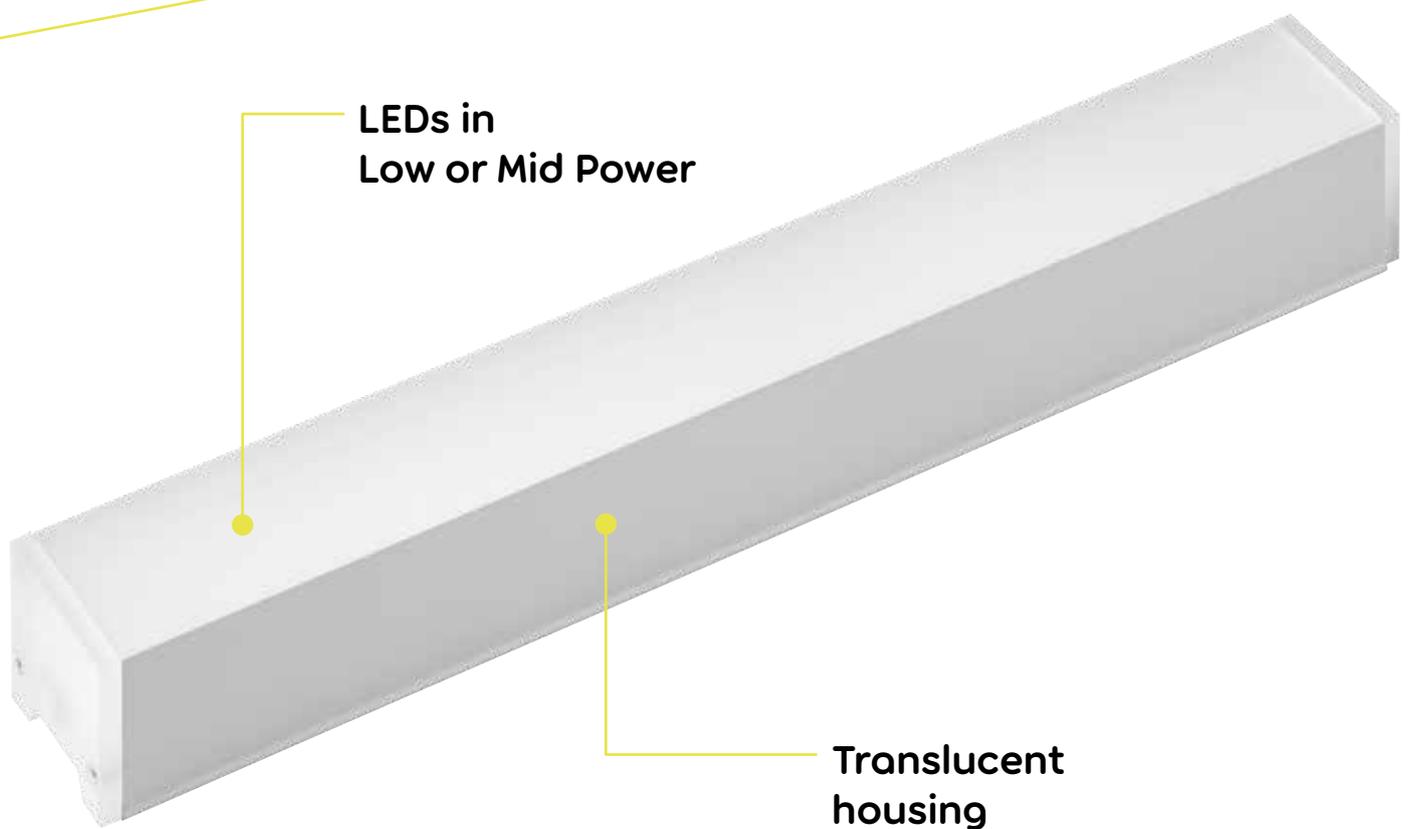

With its radiation angle of $45^\circ \times 60^\circ$, the logarithmic microreflector ensures optimum glare suppression.

Radiation angle
 $45^\circ \times 60^\circ$

Low & Mid Power Linear light inserts

Perfect uniformity

The linear modules are supplied up to a length of approximately 2.30 m, in total the portfolio contains over 150 available modules. This allows for a consistent and self-contained design.

The Mid Power Linear version is the more powerful component of the Linear light inserts. It fulfills the highest requirements for quality general lighting.

Control with DALI or DMX

The Tunable White light inserts can be activated using the operating devices with DALI. This makes it possible to control different lighting groups in a line arrangement. Light inserts with RGBW technology are DMX-compatible and can be activated individually with a resolution of up to 16 cm, for example for light guidance systems in buildings or as effective mood lighting.

Besides the defined colours of blue and green, the Low Power Linear light insert supports dynamic control with RGBW.

Tunable White Mid Power modules provide line-shaped general or accent lighting. The modules achieve a luminous flux of up to 1500 lm/m.

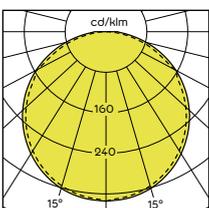

Light colour 2700 K

Light colour 4000 K

Radiation angle

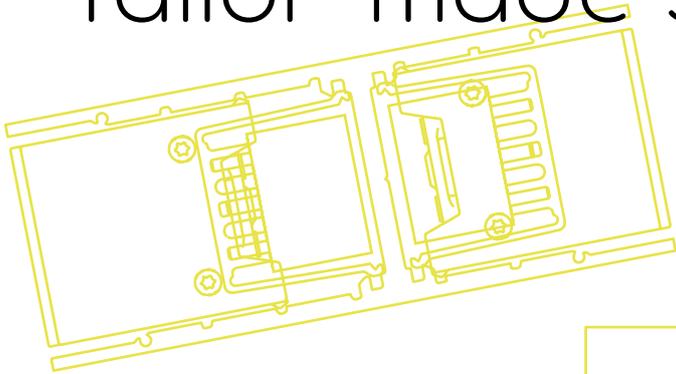

With a radiation angle of 120°, the linear light inserts ensure optimum illumination.

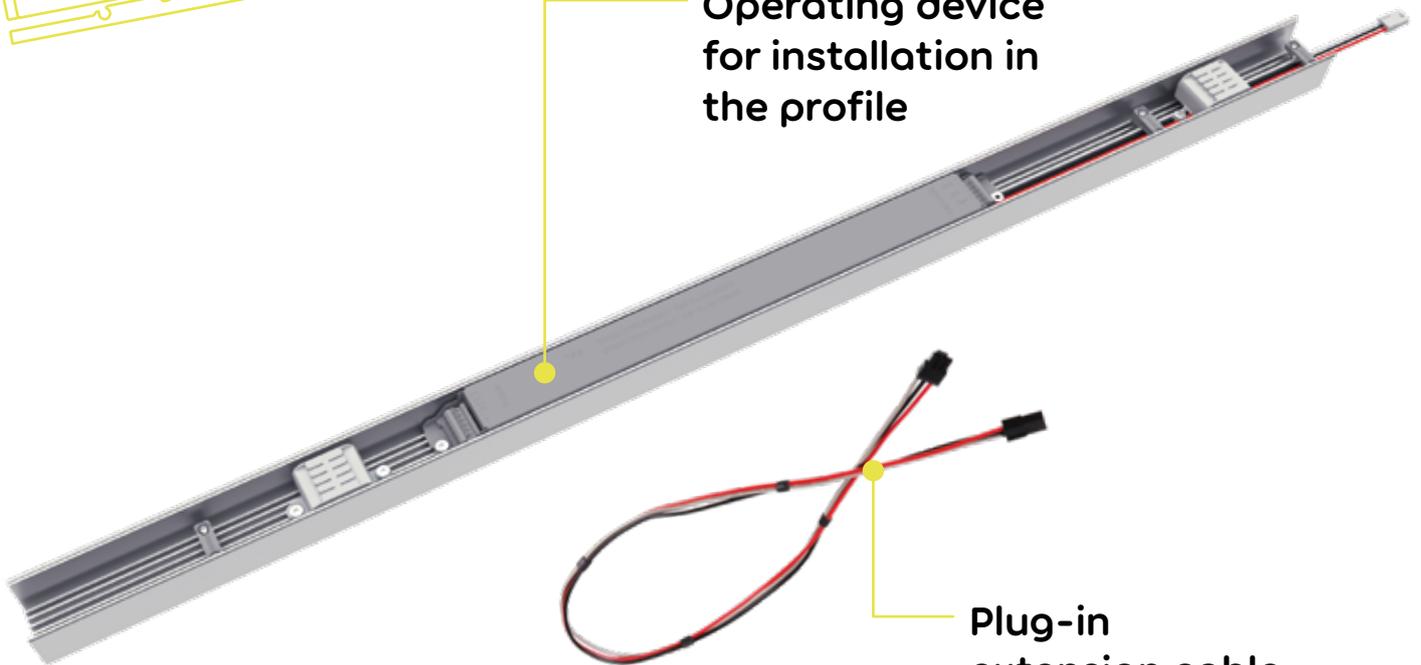

Radiation angle 120°

Operating devices & accessories

Tailor-made supply

**Operating device
for installation in
the profile**

**Plug-in
extension cable**

Two separate network systems exist for the Low and Mid Power modules as well as the High Power modules: voltage-controlled for Low, current-controlled for Mid Power Linear and High Power.

LI value

Once the luminaire draft has been created, it is time to select the appropriate power supply units. If the total of the LI values of the drafted luminaires exceeds the maximum value of the operating device, additional supply devices are required (see formula). Modules can be combined within the profiles but always require a separate power supply for Low Power to Mid and High Power. At the end, the total of the LI values of the selected light inserts must be between the minimum and maximum value of the operating device.

LI min

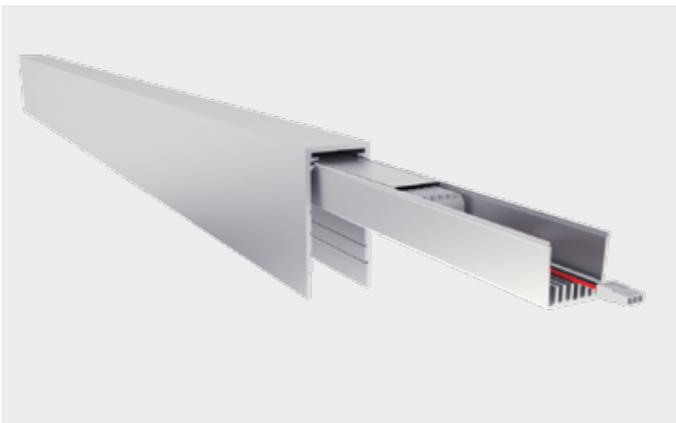

Total LI of the luminaires

LI max

Seamless integration

The operating devices can be housed either inside or outside the profiles. The supply modules for location within the mounting profile are equipped for through wiring of the primary supply voltage.

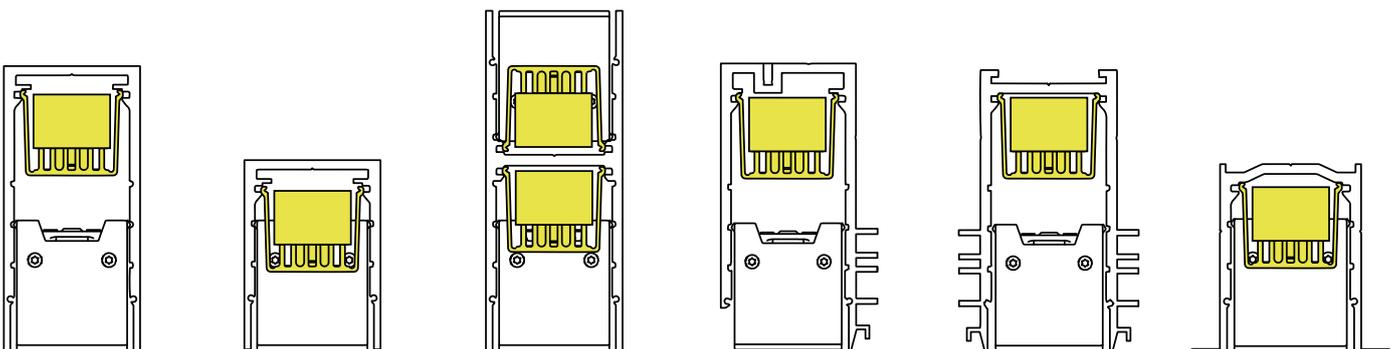

The operating devices become invisible in the profile

... or they can be located in the false ceiling

Positioning of the operating devices

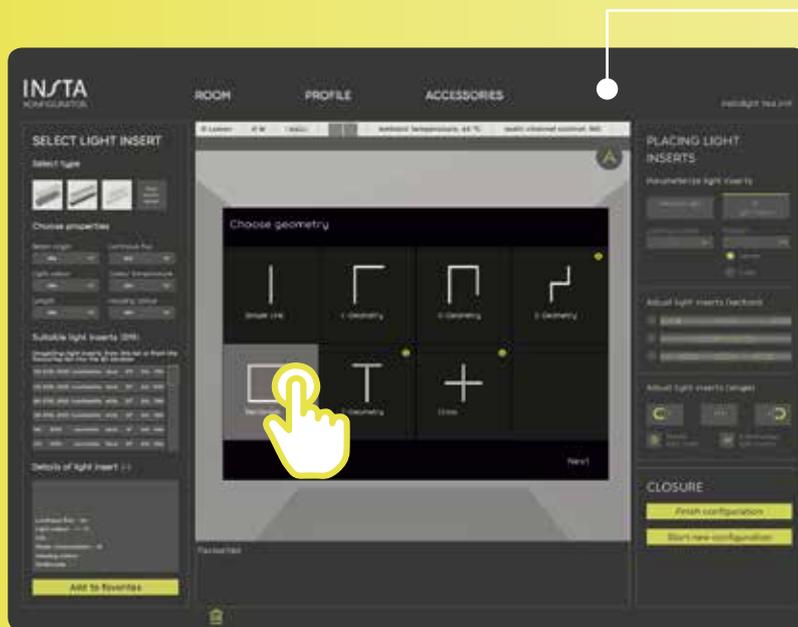

One option is to position the operating devices within the profiles

The configurator

Plug and play with NoLimit

It is easy to start configuring NoLimit. You are reliably taken step by step through the process of realising your own project. This helps the planning process and saves time.

> www.insta.de

1.

Select geometry

With NoLimit, the planner becomes the designer – this is what makes it unique. Step one: choose from seven different geometries. This will give your Lightment project its basic shape.

- > Simple line
- > L geometry
- > U geometry
- > Z geometry
- > Rectangle
- > T geometry
- > Cross

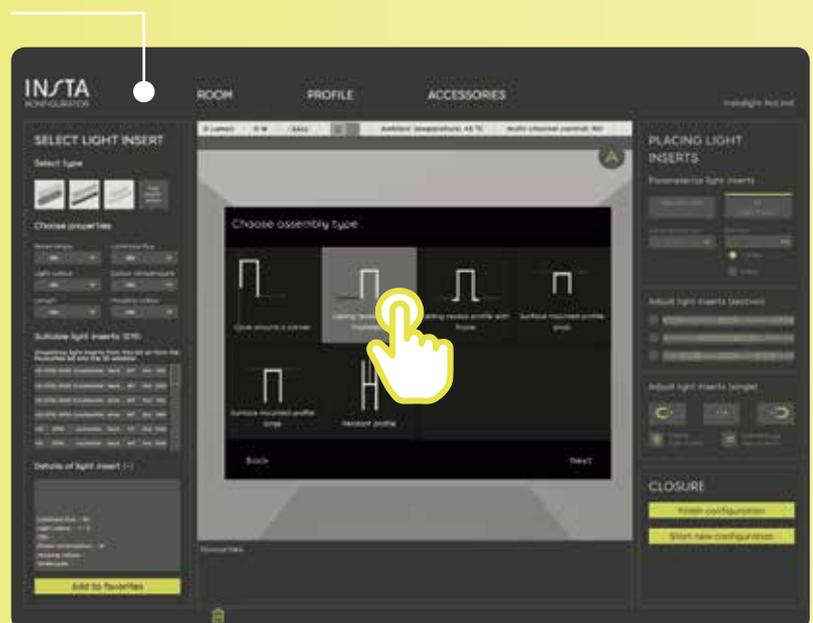

2.

Select mounting type

You decide which mountings you require, whether black or white and which influence or effect they will have on the design of your ceiling or wall.

Should the desired profile exceed the standard length of 2.30 m, then this can be extended using profile connectors. End caps ideally round off the end closures. The cover profile hides technology and any cable feed within the profile. The cover can match the colour of the profile and surface or be offset by means of contrast.

- > Light cove around a corner
- > Ceiling recess profile, frameless
- > Ceiling recess profile with frame
- > Surface mount profile, large
- > Surface mount profile, small
- > Pendant profile

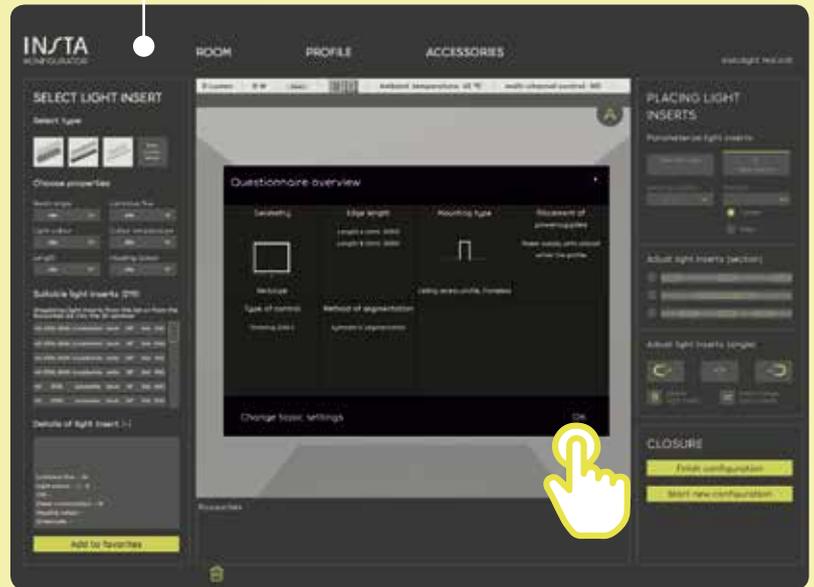

3.

Dimensions and options

Moving into the detail: select the individual edge lengths, choose your preferred segmentation method and decide on the placement of the power supply units. This is also where you decide how the lighting will be controlled.

- > Specify edge lengths
- > Select segmentation method
- > Select location of the power supply units
- > Select the activation type
- > Complete query catalogue

4.

Select and place light units

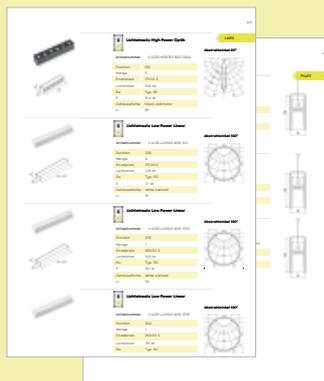

After completing the questionnaire, your NoLimit system is displayed in a 3D window. Here, you can now plan the actual lighting. Through a selection of features you can choose the correct light inserts and then place them in your profile. You can align, move and replace light inserts. Whilst you are busy with the lighting, the configurator is already working in the background taking care of the electrical dimensioning, automatically determining what power supply units are necessary.

- > Plan lighting in 3D
- > Find light inserts via properties
- > Locate, align and replace light inserts
- > Align light inserts in 3-stage grid

5.

Completing the configuration

On completion of the configuration, you will receive a PDF datasheet with all the necessary components as well as an overview drawing and a price indication for your configuration.

PDF datasheet

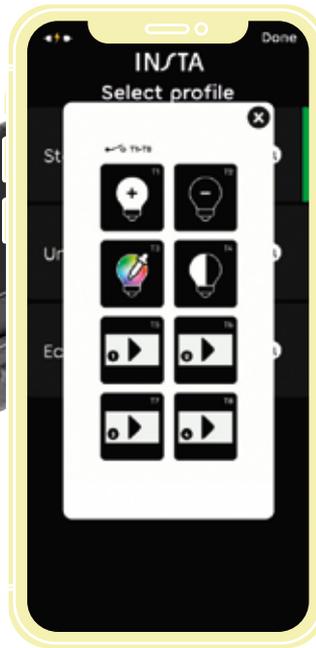

The Vario app

Light control.
Wonderfully simple.

Become a lighting designer. Create atmospheric coloured light or let your lighting automatically follow the natural course of the sun. Choose from a range of professionally pre-programmed light sequences or get creative and design your own: with the Vario app and the "instalight Vario" basic device, impressive lighting creation then becomes child's play.

instalight Vario basic device

instalight Vario app

Vario Setup app

Intuitive commissioning app for the modular lighting control device "instalight Vario".

Program a complete lighting installation in just three steps to make it easy for your customer to operate it via the Vario app and using optional connected push-buttons.

Main features:

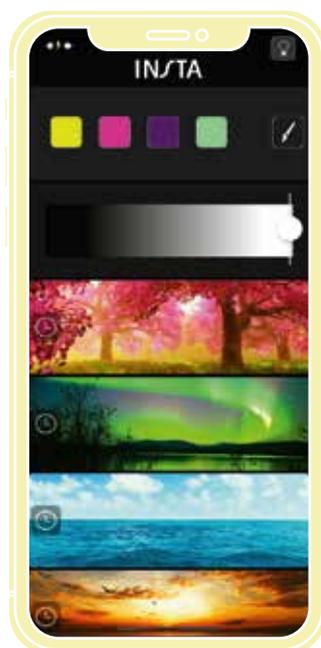

- > Control of indoor and outdoor lighting
- > Control of coloured light with RGB or RGBW
- > White light with controllable colour temperature (Tunable White TW)
- > Dynamic light variations with up to 40 changes per second
- > Storage of up to four user-defined light colours
- > Human Centric Lighting thanks to time-accurate sunlight simulation
- > Combination profiles for separate control of ambient and usable light
- > Automatic operation using weekly timer
- > Control interfaces: DALI, PWM, DMX, LEDTRIX

Vario app

Adjust your lighting to match your mood or the time of day. With instalight Vario, you can save up to four individual dynamic light colours. In addition, coloured light control in RGB, RGBW and Tunable White (TW) is possible.

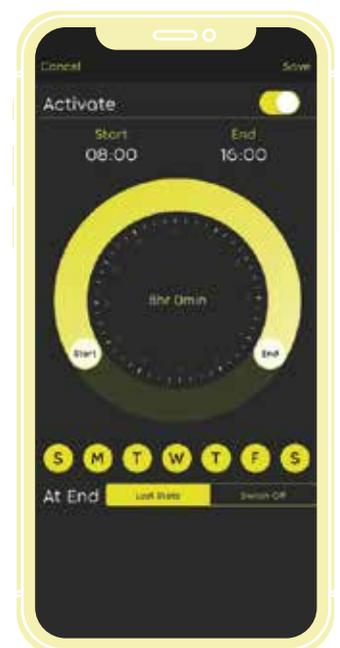

The moved light sequences always set the right atmosphere.

Intuitive App for the selection and configuration of light scenes

Colour selection via colour picker or front camera on iPhone

Weekly timer with individual switch-on/off times

instalight Vario

instalight Vario app

- > User app for Apple iPhone
- > Control of indoor and outdoor lighting
- > Control of coloured light with RGB or RGBW
- > White light with controllable colour temperature (Tunable White TW)
- > Dynamic light variations with up to 40 changes per second
- > Intuitive colour selection via colour picker or front camera on iPhone
- > Storage of up to four user-defined light colours
- > Operation via iPhone and Apple Watch

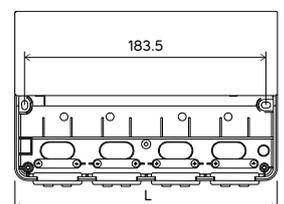

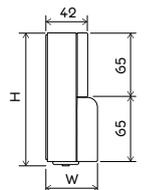

instalight Vario Setup app

- > Commissioning app for Apple iPhone
- > The easiest way to commission instalight Vario systems is via iPhone
- > Selection of ready-made operation profiles
- > Selection and allocation of ready-made light scenes (dynamic and static)
- > High projection reliability

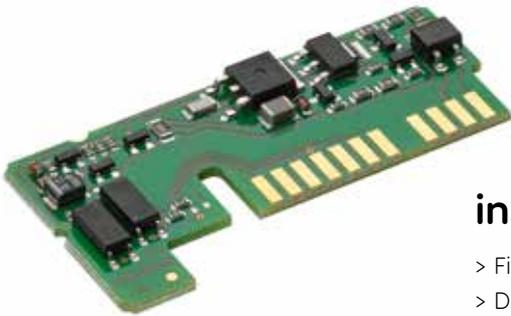

instalight Vario basic device

- > Universal device for controlling LED applications via smartphone or push-button
- > Easy operation via the free instalight Vario app
- > Configured in 3 steps by using the free instalight Vario Setup app
- > Connection to several smartphones possible
- > Separate control of DMX and DALI luminaires or PWM driven LEDs using only one device
- > Control of LED systems with automatically addressing LEDTRIX interface
- > Simple to expand thanks to plug-in communication and fieldbus modules
- > Supply via external power supply unit (accessory with micro USB plug) or USB (max. 500 mA)

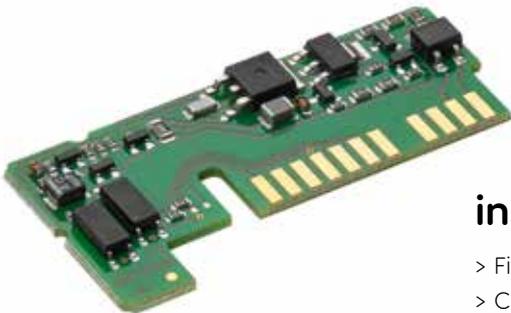

Article number	V2 GR 001	Protection class	III (SELV)
Overall size	L 200 x W 52 x H 134.5 mm	Free slots for modules	1 x USB Type A (communication) 1 x Micro-USB Type B (power supply) 3 x instalight Vario slots for communication or fieldbus modules
Rated voltage	DC 5 V via external power supply unit (not included in the scope of delivery) or USB (max. 500 mA)	Display element	1 x status LED (covered in the terminal compartment)
Max. network capacity (W)	max. 1.7 W	Memory	Micro-SD card 4 GB, prepared with light scenes
Design	Black plastic housing with terminal compartment	Accessories	Plug-in power supply art. no. V2 SNT 001 (not included in the scope of delivery)
Ambient temperature	+5° ... 35° C		

instalight Vario fieldbus module DALI dt6

- > Fieldbus module for control of up to 2 x 64 DALI devices via instalight Vario
- > Dimming: up to 2 x 64 devices via 2 x DALI dt6 broadcast
- > Control of Tunable White: up to 2 x 32 devices via 2 x DALI dt6 (addressed)
- > Operation using instalight Vario basic device

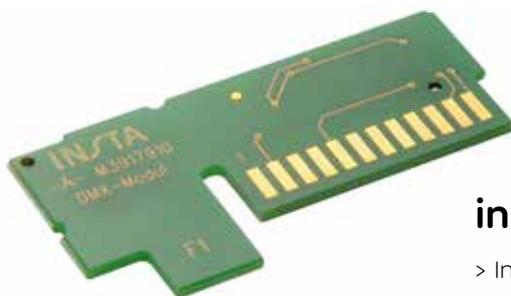

Article number	V2 FM DA6 001	Data rate	1200 Baud
Rated voltage (module)	DC 5 V	Fieldbus	1 x DALI (dt6)
Rated voltage (DALI)	DC 9.5 ... 22.5 V (external DALI supply necessary)	Current consumption	< 2 mA
Max. participants per Bus	64 (depending on external supply)	Design	SMD module with "Edge Connector"

instalight Vario fieldbus module DALI dt8

- > Fieldbus module for control of Tunable White luminaires via instalight Vario
- > Control of up to 2 x 64 devices via 2x DALI dt8 Tunable White
- > Operation using instalight Vario basic device

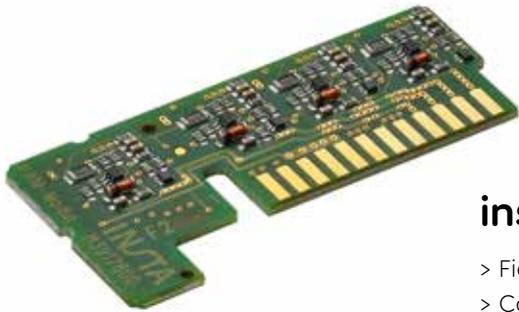

Article number	V2 FM DA8 001	Data rate	1200 Baud
Rated voltage (module)	DC 5 V	Fieldbus	1 x DALI (dt8)
Rated voltage (DALI)	DC 9.5 ... 22.5 V (external DALI supply necessary)	Current consumption	< 2 mA
Max. participants per Bus	64 (depending on external supply)	Design	SMD module with "Edge Connector"

instalight Vario fieldbus module DMX

- > Intelligent link between instalight Vario and USITT DMX512-A
- > Allows the connection and control of up to 32 participants with DMX interface to instalight Vario

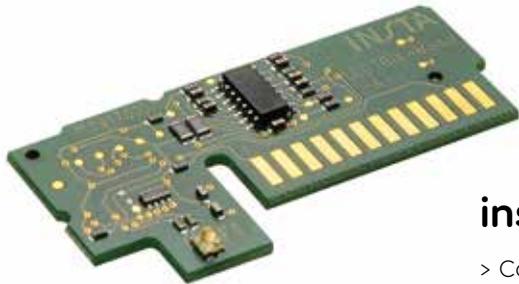

Article number	V2 FM DX 001	Topology	FLOATING
Rated voltage	DC 5 V	Data rate	250 kBit/s
Design	SMD module with "Edge Connector"	Max. participants	32
Protection class	III (PELV)	Max. number of channels	512
Fieldbus	1 x DMX interface USITT DMX512-A		

instalight Vario fieldbus module PWM

- > Fieldbus module for PWM control of LED luminaires via instalight Vario
- > Control of LED applications via up to 4 PWM channels with max. 90 W power each
- > Single colour dimming, Tunable White or RGB/RGBW control possible
- > Suitable for control of versatile LED applications thanks to universal PWM outputs
- > Supply of the PWM channels via external power supply units
- > Operation with instalight Vario basic device

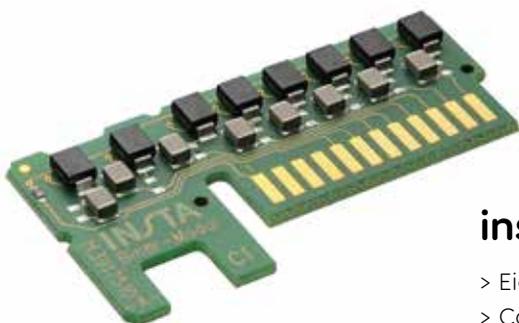

Article number	V2 FM PW 001	
Rated voltage	DC 12 ... 30 V (external)	Power consumption A 180 ... 660 mW
Design	SMD module with "Edge Connector"	Power consumption B 180 ... 660 mW
Protection class	III	PWM channels 4 (1 x A / 2 x B)
Load current per channel	max. 3 A	Modulation frequency 1000 Hz

instalight Vario fieldbus module LEDTRIX

- > Control of all types (LEDLUX linear, LEDLUX prisma, LEDLUX plane) and colour variants (TW, RGB, RGBW) of LEDLUX LX
- > Allows connection of two LEDTRIX Systems with 60 channels each (supply via external power supply units inside of the LEDTRIX systems with max. 120 W per output)
- > Supply of the instalight Vario 2 basic device via a connected LEDTRIX system possible (in this case no plug-in power supply is needed for the basic device)

Article number	V2 FM LX 001	
Rated voltage	DC 28 V	Fieldbus 2 x LEDTRIX each with 60 channels
Design	SMD module with "Edge Connector"	Distance 100 m
Laying instructions	SELV	

instalight Vario communication module binary

- > Eight independent binary inputs
- > Control of an instalight Vario system e.g. via standard push-buttons
- > Module is automatically detected by the basic device
- > Automatic allocation of the inputs via the instalight Vario Setup app

Article number	V2 KM 8F 001	
Rated voltage	DC 5 V	Laying instructions SELV
Design	SMD module with "Edge Connector"	Max. cable length 10 m
Short-circuit current	1 mA	Number of inputs 8

instalight Vario communication module, WiFi, USB

- > Provides its own instalight Vario Hot Spot for to connect several iPhones
- > Access for the instalight Vario apps for commissioning and operation

Article number	V2 KM WL 001	Radio frequency	2.4 GHz
Rated voltage	DC 5 V	Transmission capacity	max. 20 mW
Design	USB housing	Protocol	Type IEEE802.11b/g/n
USB connection	Type A/Version 2.0	Display	Link/Activity
Antenna	internal	Safety type	WPA2-PSK
Ambient temperature	+0° ... 40°C		

instalight Vario communication module LAN USB

- > Connection to existing WiFi router via Ethernet
- > Use of the existing infrastructure

Article number	V2 KM LN 001	USB connection	Type A
Rated voltage	DC 5 V	LAN connection	RJ-45
Design	USB housing	Display	Link/Activity
USB version	2.0
